Möbelschlösser sind heute kleine technische Meisterwerke, die höchsten Qualitätsstandards genügen. Je nach Montageart unterscheidet man zwischen Aufschraubschlössern, Einsteckschlössern und Drehstangenschlössern. Soviel ist sicher: Für jede Anforderung finden Sie das passende Schloss.

Today, furniture locks are small technical masterpieces that satisfy the toughest demands. According to the assembly type, a distinction is made between screw-on locks, mortise and espagnolette locks. But one thing is sure: you will find just the right lock for what ever you want to do.

De nos jours, les serrures pour meubles sont des petits chefs d'œuvre de technique qui répondent aux standards de qualité les plus élevés. Selon le type de montage, on fait la distinction entre les serrures à visser, les serrures à larder et les serrures à espagnolette. Une chose est certaine: quel que soit votre besoin, vous trouverez la serrure qui convient.

Meubelsloten zijn vandaag de dag kleine technische meesterwerkjes die voldoen aan de hoogste kwaliteitsstandaards. Afhankelijk van de montagewijze maakt men een onderscheid tussen oplegsloten, insteeksloten en spanjoletsluitingen. Eén ding is zeker: voor elke situatie het passende slot!

Le serrature per mobili sono da venir considerate ormai come delle piccole opere d'arte della tecnica, che soddisfano i più esigenti standard di qualità. A seconda del tipo di montaggio si distinguono: serrature avvitabili, serrature ad inserimento e serrature con asta girevole. Siate comunque certi che troverete la serratura adatta ad ogni particolare esigenza.

Aufschraubschlösser bzw. Zylinderaufschraubschlösser werden auf der Türrückseite aufgeschraubt, wobei letztere mit einem Sicherheitsschlüssel versehen sind.

Screw-on locks or cylinder screw-on locks are screwed onto the back of the door, with the latter being provided with a safety key.

Les serrures à visser ou bien les serrures à visser cylindriques sont vissées sur l'arrière de la porte; ces dernières sont munies d'une clé de sécurité.

Oplegsloten, resp. cilinder-oplegsloten worden op de achterkant van de deur geschroefd, waarbij de cilindersloten voorzien zijn van een veiligheidsleutel.

Le serrature avvitabili e le serrature avvitabili a cilindro si avvitano sul lato interno della porta o dell'anta. Il tipo a cilindro è dotato di chiave di sicurezza.

Einsteckschlösser werden unsichtbar in das Türblatt eingelassen.

Mortise locks are sunk into doors invisible from outside.

Les serrures à larder sont encastrées de façon invisible dans le vantail de porte.

Insteeksloten worden onzichtbaar in het deurblad ingepast.

Le serrature ad inserimento non sono visibili, perché vengono inserite nel corpo del battente o dell'anta.

Drehstangenschlösser können bei hohen Schranktüren rückseitig aufgeschraubt werden. Die Schließhaken greifen dabei hinter Anschlagstifte, die im Schrankinneren angebracht werden (Dreipunkt-Verriegelung).

Espagnolette locks can be screwed onto the back of high cabinet doors. The locking hooks are set to grip behind stop pins which are inserted in the interior of the cabinet (three-point locking).

Si les portes d'armoires sont hautes, les serrures à espagnolette peuvent être vissées au dos. Les crochets de fermeture s'emboîtent derrière les goujons de butée installés à l'intérieur des armoires (verrouillage trois points).

Spanjoletsluizingen kunnen op de achterkant van hoge kastdeuren worden geschroefd. De sluishaken grijpen achter de aanslagpennen, die aan de binnenkant van de kast zijn aangebracht (driepunten-vergrendeling).

Le serrature con asta girevole si possono applicare all'interno delle porte alte di armadi. I ganci di serraggio si agganciano ai perni di battuta fissati all'interno dell'armadio (bloccaggio di chiusura in tre punti).

Spezialschlösser: Schiebetürschloss, Zylinder-Klappenschloss, Zylinder-Hebelschloss, Rolljalousieschloss, Mini-Druckschloss

Special locks: sliding door locks, flap door cylinder lock, cylinder cam lock,

roller shutter locks, mini push lock

Serrures spéciales: serrure pour porte coulissante, serrure cylindrique d'abattant, serrure cylindrique à levier, serrure de volet roulant, mini serrure à pression

Speciale sloten: schuifdeurslot, cilinder-klepslot, cilinder-handelslot, roljaloetzeslot, mini-drukslot

Serrature speciali: serratura per porta scorrevole, serratura a cilindro per sportello ribaltabile, serratura a leva con cilindro, serratura per avvolgibili, serratura a pressione in miniatura.

- (I)** Informazioni sulle serrature per mobili

**Schlossrichtung:** Schlösser müssen nach der Anschlagrichtung der Tür ausgewählt werden. Alle Aufschraub- und Einsteckschlösser sind rechts/links und für Schublade verwendbar.

**Direction of lock:** locks must be selected according to the hinge side of the door. All screw-on and mortise locks can be used on the right/left and for drawers.

**Direction de la serrure:** les serrures doivent être choisies en fonction de la direction de butée de la porte. Toutes les serrures à visser et à larder sont utilisables à droite et à gauche ainsi que pour les tiroirs.

**Slotrichting:** sloten moeten per draai-richting worden gekozen. Alle oplegen insteeksloten kunnen rechts/links en voor lades worden gebruikt.

**Senso di apertura delle serrature:** le serrature vanno scelte a seconda del tipo di battuta dell'anta o della porta. Tutte le serrature avvitabili e quelle ad inserimento sono applicabili a porte ed ante con battuta sia a destra che a sinistra. Inoltre si possono usare anche come chiusure di cassetto.

Das Dornmaß gibt den Sitz der Schlüsselbohrung an. Dornmaß X = Abstand Mitte Schlüsselbohrung bis Vorderkante Schloss.

The back set indicates the location of the keyhole drilling. Back set X = distance from centre of keyhole to front edge of lock.

La dimension de la broche donne une indication sur l'emplacement de perçage du trou de la serrure. Dimension X de la broche = distance entre le milieu du trou de la serrure et l'arête avant de la serrure.

De doornmaat geeft de plaats aan van de boring voor het sleutelgat. Doornmaat X = afstand van het midden van het sleutelgat tot de voorkant van het slot.

In base alle dimensioni del catenaccio viene determinato il punto in cui praticare il foro per il buco della chiave.

Dimensione del catenaccio X = Distanza dal centro del buco della chiave fino al bordo anteriore della serratura.

**Schließzwang:** Schlüssel können erst nach Verschließen aus dem Schloss gezogen werden.

**Forced locking:** keys can be removed from the lock only after the door is locked.

**Obligation de fermeture:** les clés ne peuvent être retirées de la serrure qu'après fermeture.

**Sluitplicht:** Sleutels kunnen pas na het afsluiten uit het slot worden getrokken.

**Costrizione di chiusura:** La chiave si può estrarre dalla serratura solo dopo averla girata per chiudere la serratura.

### Nr./No./Ref. 00592/00593

#### Zylinder-Aufschraubschloss

- unterschiedlich schließend, d. h. jedes Schloss hat seinen individuellen Schlüssel (z. B. für Möbel, in denen Wertgegenstände verwahrt werden)  
- verstellbares Dornmaß

#### Cylinder screw-on lock

- keyed-to-differ, i.e. each lock has its own individual key (e. g. for furniture in which valuables are kept)  
- adjustable back set

#### Serrure à visser cylindrique

- les variures sont différentes, c'est-à-dire que chaque serrure a sa propre clé (par exemple pour les meubles dans lesquels des objets de valeur sont conservés)

- la dimension de la broche est réglable  
Cylinder-oplegslot  
- verschillend sluitend, d.w.z. ieder slot heeft zijn eigen individuele sleutel (bijv. voor meubelen waarin waardevolle dingen worden opgeborgen)  
- verstelbare doornmaat

#### Serratura avvitabile a cilindro

- chiusure di tipo differente, cioè ogni serratura ha la sua chiave particolare (p. es. per mobili nei quali si tengono oggetti preziosi)  
- dimensione del catenaccio regolabile

- Ⓓ Infos Schnäpper, Magnetverschlüsse, Riegel
- ⒼⒷ Information on catches, magnetic locks, bolts
- Ⓕ Informations relatives aux loqueteaux, aux fermetures magnétiques, aux verrous
- ⒼⓃ Informatie kliksluitingen, magneetsluitingen, grendels
- Ⓘ Informazioni su chiavistelli, chiusure a magnete, paletti

Schnäpper und Magnetverschlüsse haben in erster Linie die Aufgabe, ein selbsttätiges Öffnen von Türen und Klappen zu verhindern. Schlösser und Riegel dagegen sollen neben dieser Funktion noch ein unbefugtes Öffnen verhindern. Auf Schnäpper und Magnetverschlüsse kann verzichtet werden, wenn z. B. Federscharniere zum Einsatz kommen. Schlösser hingegen sind durch eine andere Technik der Scharniere nicht zu ersetzen.

The primary task of catches and magnetic locks is to prevent doors and flaps from opening by themselves. In addition to this function, locks and bolts on the other hand should also prevent unauthorised opening. Catches and magnetic locks will not be necessary if, for instance, spring hinges are used. Locks on the other hand cannot be replaced by any kind of hinge.

Les loqueteaux et les fermetures magnétiques ont pour première mission d'empêcher que les portes et les abatants s'ouvrent d'eux-mêmes. Outre cette fonction, les serrures et les verrous doivent, en plus, empêcher une ouverture non autorisée. On peut se passer de loqueteaux et de fermetures magnétiques lorsque l'on utilise par exemple des charnières à ressort. Les serrures par contre ne peuvent pas être remplacées par une autre technique de charnière.

Klik- en magneetsluitingen moeten op de eerste plaats verhinderen dat deuren en kleppen vanzelf open gaan. Sloten en grendels moeten daarenboven verhinderen dat onbevoegden de deuren openen. Klik- en magneetsluitingen kunnen achterwege blijven, als bijv. veerscharnieren worden aangebracht. Sloten kunnen echter niet door een andere scharniertechniek worden vervangen.

Schnäpper  
Catches  
Loqueteaux  
Kliksluitingen  
Chiavistelli a scatto

I chiavistelli a scatto e le chiusure con magneti si impiegano soprattutto quando si vuole evitare che battenti e ante possano aprirsi o sbattere inavvertitamente. Le serrature ed i chiavistelli, invece, oltre ad evitare il predetto inconveniente, servono per impedire che degli estranei possano aprire una porta o

un'anta. Si può anche fare a meno dei chiavistelli a scatto e delle chiusure con magneti quando si applicano p. es. cerniere a molla. Invece, le serrature non si possono sostituire con un altro tipo di cerniera.
